

in support of complex technical systems

Whether your product is an engine part, software program or technical service, it's also part of a system. Developing, supplying, acquiring or operating technical systems with substantial lifecycles creates many opportunities for efficiencies and cost-effective planning and many risks of failure and corporate accountability.

Syntell's consulting expertise and training services smooth the transition from traditional engineering to new integrated processes and procedures, adapting international concepts for engineering management in the context of the system and the life cycle. This is based on our significant and comprehensive know-how of best practice and pragmatic tailoring of standards, methods and tools.

Syntell's wide portfolio of engineering management skills can support any business or organisation involved in developing, supplying, acquiring or operating complex technical systems concerning:

- ▶ Bid and acquisition support
- ▶ Project and product management
- ▶ Systems engineering
- ▶ Requirements management
- ▶ Configuration management
- ▶ System and SW Safety
- ▶ Logistics engineering and management
- ▶ Information management
- ▶ Training in all competence areas

International consulting expertise managing the acquisition, development, supply or operation of complex technical systems, with a whole life perspective.

Contact Syntell AB now for a skilled and comprehensive systems perspective.
